

FastBond™ is *Really* Fast!

Did you know the time to issue an eSTB in FastBond™ is usually under one minute? How long does it take in your surety system?

If you are looking for an eBond issuing portal that keeps up with the fast-paced business of customs brokerage, then FastBond™ is the system for you.

Using FastBond™ can save you and your staff valuable time because we require minimal information to be keyed in order to issue a bond...single or continuous. For example, entering tariff numbers especially for multiple commodities can really slow down the process. In FastBond™, the same entry would take less than a minute to complete because tariff numbers are not needed.

The table below illustrates what data elements are needed to issue an eSTB in FastBond™. See for yourself why using FastBond™ is a smart choice.

Importer Number	Importer Name and Address	Bond Type
Bond Activity Code	Port Code	Entry Number
Entry Type Code	Bond Amount	Risk Type
Optional Secondary Notify Party	Optional Broker Reference Number	

Consider Automation

If processing a bond in under a minute is too slow for you, consider an electronic data interface (EDI) connection and process your bonds in seconds. Roanoke Trade can integrate with your ABI software provider on eBond for single transaction bonds. Automating the process will eliminate the need to double key your bond data into your ABI software and FastBond™. Contact us at fastbond@roanokegroup.com to learn more.
